SUMMARY

I am presently a last year student studying in information technology. With hands-on experience from tasks and projects, i have a knowledge of .net and .net core project uses C#, with git tracking the related task management code and tools like postman for learning and interacting with the API.

EDUCATION

Nam Can Tho University (DNC)

2021 - 2025

Information technology

GPA currently: 3.63

SKILLS

Technical

C#, ASP.NET Core, ASP.NET Framework, EF, LINQ.
RESTs API.
SOLID.

DBMS

SQL Server, MySQL, HeidiSQL.

Tool

IDE: Visual Studio Code, Visual Studio.
Version control: Git.
Version control system: GitHub.
API: Postman.

Foreign language

B1 English Level

WORK EXPERIENCE

Công ty Cổ phần Hệ sinh thái 365 (365 EJS)

05/2024 - 12/2024

Intern Backend C#

Assigned and worked on projects pertaining to APIs, grpc, test cases.

PROJECTS

Booking hotel website

10/2024 - 12/2024

Leader, back-end

Project Description: This initiative aimed to produce a web for online hotel booking. I was in charge of database design and back-end development, ensuring that all the features were integrated and worked together seamlessly.

Teamsize: 2

Technical Stack:

- Backend: ASP.NET Core, Entity Framework, LINQ, SQL Server.
- Frontend: HTML, CSS, Javascripts, Bootstrap.

Responsibilities:

Back-end:

- Plan and choose the appropriate technology.
- Complete the project's code to allow the interface to accept data from the database, use Auto-mapping for mapping data.
- Implement security and claim authorization for users.
- Implement CRUD construction for website administrators.

Front-end:

- Rene the website layout based on the template and extend it with HTML, CSS, and JavaScript.
- Design and enhance the UI; make it responsive.
- Use Data to get and display information.
- Division produces components.
- Set up page redirects for each user type.

Movie watching website

03/2024 - 06/2024

Project Description: The goal of this project was to create an online movie web. I was in charge of database design and full-stack development, ensuring that all features were integrated and worked together seamlessly.

Technical Stack:

- Backend: ASP.NET Core, Entity Framework, LINQ, SQL Server.
- Frontend: HTML, CSS, Javascripts, Bootstrap.

Responsibilities:

Back-end:

- Plan and choose the appropriate technology.
- Complete the project's code to allow the interface to accept data from the database.
- Implement security and claim authorization for users.
- Implement CRUD construction for website administrators.

Front-end:

- Rene the website layout based on the template and extend it with HTML, CSS, and JavaScript.
- Design and enhance the UI; make it responsive.
- Use Data to get and display information.
- Division produces components.
- Set up page redirects for each user type.
