SUMMARY

Backend-focused developer with hands-on experience building enterprise applications using C# and .NET. Comfortable with Clean Architecture, CQRS, and collaborative Agile environments. Experienced in delivering full-stack systems with ASP.NET Core, EF Core, Vue.js, and FastAPI. Fast learner who uses AI tools to improve daily engineering productivity and enjoys sharing knowledge with junior colleagues.

SKILLS

Programming Languages: C#, VB.NET, Python, JavaScript
Frameworks: ASP.NET Core, WinForms, EF Core, Vue.js, Flask, FastAPI
Architecture: Clean Architecture, CQRS, Repository Pattern, 3-Layer
Database: SQL Server, MySQL, Oracle
Tools: Git, Postman, Docker
Others: SOLID, LINQ, REST API, gRPC, JWT, jQuery, Bootstrap, xUnit, FluentValidation, TensorFlow/Keras, AutoMapper

EXPERIENCE

FPT Software

10/2025 – 09/2026

Role: Developer

- Developed and maintained core features, complex business logic, and responsive UI components for an enterprise .NET WinForms application.
- Developed and maintained Oracle Views with complex joins and filtering logic to support business rules and data access.
- Collaborated with team leaders, business analysts, testers, and project managers as part of an Agile engineering organization of over 100 members to ensure consistent, high-quality product deliveries.

Key Achievements:

- Built an AI agent that automated repetitive data conversion and formatting tasks, reducing manual effort for the team.
- Guided 20 technical interns to grasp project architecture and real-world workflows quickly.
- Completed internal training programs focusing on AI usage, language proficiency, and professional skills.

Technologies: C#, VB.NET, EF Core, WinForms, Oracle, FarPoint

365 EJSC (365 Ecosystem Joint Stock Company)

7/2024 – 12/2024

Role: Intern

- Developed internal APIs using ASP.NET Core and EF Core, improving response handling and data consistency.
- Applied Clean Architecture, DDD, and CQRS to separate layers and enhance long-term scalability.
- Built a validation pipeline with FluentValidation for DTOs, reducing input errors.
- Wrote unit tests with xUnit for core services to ensure stability.
- Implemented gRPC endpoints, reducing overhead compared to REST for internal communication.

Technologies: C#, .NET 8, EF Core, SQL Server, JWT, xUnit, Clean Architecture, CQRS, FluentValidation

PROJECTS

DocForge – Document & Media Conversion Platform

7/2026 – 9/2026

Role: Full-stack Developer

- Built a full-stack toolkit supporting Markdown-to-PDF (multiple themes and metadata), PDF to editable DOCX with page-range selection, and Audio to editable transcript.
- Implemented a human-in-the-loop Transcript Editor with segment preview, find & replace, and export to SRT / VTT / TXT.

Technologies: Vue 3, Vite, Pinia, Bootstrap 5, FastAPI, WeasyPrint, pdf2docx, faster-whisper, Groq API

BookingHotels – Online Hotel Booking System

10/2024 – 12/2024

Role: Team Lead & Full-stack Developer | 2-member team

- Designed 3-layer architecture and database schema with EF Core Code-First, soft delete, and audit trail.
- Developed booking workflows with session handling and role-based authorization (Admin/User).
- Applied Repository Pattern, Fluent API, and AutoMapper; integrated AdminLTE dashboard with pagination and notifications.

Technologies: C#, ASP.NET Core, EF Core, SQL Server, AdminLTE, AutoMapper, Bootstrap

Portfolio & Demo: vytong.pages.dev | **Source:** github.com/VzTong/BookingHotels

MoviePJ (DACS1) – Movie & Anime Management System

03/2024 – 06/2024

Role: Full-stack Developer

- Designed a relational database with EF Core, including many-to-many relationships, soft delete, and an audit trail.
- Built search, pagination, and cookie authentication for films, users, actors, studios, genres, and episodes.
- Developed responsive Bootstrap 5 UI and admin dashboard with statistics and content moderation.

Technologies: C#, ASP.NET Core, EF Core, Bootstrap 5, SQL Server

Portfolio & Demo: vytong.pages.dev | **Source:** github.com/VzTong/DACS1

LungDx – Chest X-ray Lung Disease Diagnosis

02/2025 – 05/2025

Role: Full-stack Developer | Graduation Thesis

- Conducted a comprehensive performance comparison of 5 deep learning models (custom CNN, ResNet50, MobileNetV2, EfficientNetB0, and ensemble) for classifying chest X-ray images into 5 disease classes.
- Built a web application to visually demonstrate model performance, including image pre-check, real-time progress via Flask-SocketIO, diagnosis history, and responsive Bootstrap 5 UI with dark/light mode.

Technologies: Flask, TensorFlow/Keras, OpenCV, Pillow, Bootstrap 5

EDUCATION

Nam Can Tho University (DNC), Vietnam 2021 – 2025

Bachelor of Engineering (B.E.) in Information Technology | GPA: 8.61/10

LANGUAGES

English – B1 (2025)
