SUMMARY

Backend-focused developer with hands-on experience building enterprise applications using C# and .NET. Comfortable with Clean Architecture, CQRS and collaborative Agile environments. Previously delivered full-stack systems with ASP.NET Core, EF Core, Vue 3 and FastAPI. Fast learner who applies AI tools to improve daily engineering productivity and enjoys mentoring juniors.

SKILLS

Programming Languages: C#, VB.NET, Python, JavaScript

Frameworks: ASP.NET Core, WinForms, WPF, EF Core, Vue.js, Flask, FastAPI

Architecture: Clean Architecture, CQRS, Repository Pattern, 3-Layer

DBMS: SQL Server, MySQL, Oracle

Tools: Git, Postman, Docker, AdminLTE

Others: SOLID, LINQ, REST API, gRPC, JWT, jQuery, Bootstrap, xUnit, FluentValidation, TensorFlow/Keras, AutoMapper

EXPERIENCE

FPT Software

10/2025 – Present

Project size: 100+ members | Role: Member

- Developed and maintained core features, complex business logic and responsive UI components for an enterprise .NET WinForms application.
- Built and maintained data processing pipelines using Oracle Database and Oracle Views to support business logic and daily progress tracking.
- Collaborated cross-functionally with an Agile engineering organization to ensure consistent, high-quality product deliveries.

Achievements:

- Improved workflow efficiency by approximately 5% by implementing a small AI agent that automates repetitive conversion/formatting tasks.
- Guided 20 technical interns, helping them quickly grasp project architecture and real project workflows.
- Completed internal training programs focusing on AI usage, language proficiency and professional skills.

Technologies: C#, VB.NET, EF Core, Windows Forms, Oracle, FarPoint

365 EJSC (365 Ecosystem Joint Stock Company)

9/2024 – 12/2024

Project size: 6 members | Role: Intern

- Developed internal APIs using ASP.NET Core + EF Core, improving response handling and data consistency.
- Applied Clean Architecture, DDD and CQRS to separate layers and enhance long-term scalability.
- Built a validation pipeline with FluentValidation for DTOs, reducing input errors.
- Wrote Unit Tests (xUnit) for core services to ensure stability.
- Implemented gRPC endpoints, reducing overhead compared to REST for internal communication.

Technologies: C#, .NET 8, EF Core, SQL Server, JWT, xUnit, Clean Architecture, CQRS, FluentValidation

PROJECTS

DocForge – Document & Media Conversion Platform

2025 – Present

Role: Solo Developer

- Built full-stack toolkit supporting Markdown → PDF (multiple themes + metadata), PDF → editable DOCX with page-range selection, and Audio → editable transcript.
- Frontend: Vue 3 + Vite + Pinia + Bootstrap 5.
- Backend: FastAPI with WeasyPrint, pdf2docx and faster-whisper / Groq API.
- Implemented human-in-the-loop Transcript Editor with segment preview, find & replace, and export to SRT / VTT / TXT.

BookingHotels – Online Hotel Booking System

10/2024 – 12/2024

Role: Team Leader & Backend Developer | Team of 2

- Primarily Backend, light FE support.
- Designed 3-layer architecture (Data, Web, Share) and database schema with EF Core Code-First, soft delete and audit trail.
- Developed CRUD and booking workflows with session handling and role-based authorization (Admin/User).
- Applied Repository Pattern, Fluent API, AutoMapper; integrated AdminLTE dashboard with pagination and notifications.

Portfolio / Demo: vztong.github.io | **Source:** github.com/VzTong/BookingHotels

MoviePJ (DACS1) – Movie & Anime Management System

03/2024 – 06/2024

Role: Full-stack Developer

- Designed relational database with EF Core, including many-to-many relationships, soft delete and audit trail.
- Built full CRUD for films, users, actors, studios, genres and episodes; search, pagination and cookie authentication.
- Developed responsive Bootstrap 5 UI and admin dashboard with statistics and content moderation.

Portfolio / Demo: vztong.github.io | **Source:** github.com/VzTong/DACS1

LungDx – Chest X-ray Lung Disease Diagnosis

02/2025 – 05/2025

Role: Solo Developer | Graduation Thesis

- Developed end-to-end web application classifying chest X-ray images into 5 classes using Deep Learning ensemble (custom CNN, ResNet50, MobileNetV2, EfficientNetB0).
- Implemented image pre-check, real-time progress via Flask-SocketIO, diagnosis history and responsive Bootstrap 5 UI with dark/light mode.
- Full stack: Flask + TensorFlow/Keras + OpenCV/Pillow.
