SUMMARY

.NET Developer with hands-on experience from academic projects and internships. Skilled in C#, ASP.NET Core, and building RESTful APIs with relational databases. Familiar with software architecture patterns (SOLID, Clean Architecture) and motivated to learn, adapt, and contribute to backend projects.

LANGUAGES

English – B1 (Internal)

EDUCATION

Information technology – GPA: 8.61/10

Nam Can Tho University (DNC), Vietnam (2021 – 2025)

EXPERIENCE

365 Ecosystem Joint Stock Company (365 EJSC)

9/2024 – 12/2024

.NET Backend Intern

Contributed to backend development with focus on ASP.NET Core, EF Core, and gRPC.

- Developed internal APIs for user & transaction modules using ASP.NET Core + EF Core, improving response handling.
- Applied Clean Architecture, DDD, CQRS to separate layers and enhance scalability.
- Built a validation pipeline with FluentValidation for DTOs, reducing input errors.
- Wrote Unit Tests for core services to ensure stability.
- Implemented gRPC for inter-service communication, improving efficiency and reducing overhead compared to REST.

PROJECTS

Booking hotel website

10/2024 – 12/2024

Project Description: An online hotel booking website for room search, booking/cancellation, and admin management.

Tech stack: ASP.NET Core (MVC), C#, EF Core, LINQ, SQL Server, AutoMapper, jQuery, Bootstrap | **Role:** Team Leader & Backend Developer (team of 2)

- Designed 3-layer architecture (Data, Web, Share) & database schema with **EF Core Code-First**.
- Developed **CRUD** for hotels, branches, rooms, users, etc, and admin using **ASP.NET Core MVC + EF Core**.
- Implemented booking workflows with session handling & role-based **authorization**.
- Applied **Repository Pattern, Fluent API, AutoMapper**; integrated AdminLTE dashboard with pagination & notifications.

Demo & description: nhavy.id.vn - See in Portfolio section | **GitHub:** github.com/VzTong/BookingHotels

Movie watching website

3/2024 – 6/2024

Project Description: An online movie streaming website with user management and movie browsing features.

Tech stack: ASP.NET Core (MVC), C#, EF Core, LINQ, SQL Server, HTML, CSS, JavaScript, Bootstrap | **Role:** Full-stack Developer.

- Designed relational database with **EF Core** (many-to-many: film-actor, film-genre).
- Built **CRUD** for movies, users, etc, and admin with **ASP.NET Core MVC + EF Core**, including search, pagination, and soft delete.
- Secured **authentication & authorization** with cookie/session (Admin/User).
- Developed responsive UI with **Bootstrap, HTML, CSS, JavaScript**.
